

QUALITY ★★★★★

Crystal Silver Star M

Loudspeaker cable, 2x4,0 mm²

Three ingenious radiating air-tubes, which are embedded into the structure, do offer two advantages: first of all, the cable gains an enormous stability while it is still offering an outstanding flexibility. On the other hand, the construction allows a perfectly consistent parallelism of both conductors, which results in superb electrical parameter. 50 single twisted inner strands, measuring only 0,254 mm each, minimize the skin effect reliably. To gain further improvement in signal-transfer, we use silver plated OFC for this cable. The result is an outstanding, brilliant sounding cable with an extremely high grade of neutralism.

Features

- ✓ Individually stranded wire bundles
- ✓ For amplifier performances of up to 200 watts
- ✓ Robust plastic sheathing
- ✓ SPC - silver-plated copper
- ✓ Ultra-thin individual wires

Technical Data

Cable cross-section 2 x 2.5 mm²
 Cable geometry Flat
